Renewable Energy Competition 2025 social media Report

September, 2025

Prepared by NREP

Overview

The Renewable Energy Competitions 2025 had 3 main activities including skits, essays, and cooking and these drew wide attention across social media platforms, highlighting innovation, sustainability, and youth-driven solutions through creativity. Social media posts featured live updates, key speaker highlights, and impactful quotes that resonated with audiences. Social Media impact on LinkedIn was about **5,000** and **100k** on (X) Twitter via views, impressions & Engagement (likes, reposts and comments).

Engagement was strong, with high interaction on video posts. Overall digital presence increased visibility for this renewable energy initiative.

Key Messages Amplified

- Adoption of clean and renewable energy technologies is vital for sustainable development.
- Youth innovation is shaping the future of energy solutions.
- Partnerships between private sector, academia, and government drive impact.

Audience Insights

- Age Range Engaged Most: 18–35 years
- Geographic Reach: Most engagements were primarily from Uganda.

Highlights from Social Media

Live stream and updates about the event from the audience, on digital and media platforms.

Recommendations for Future Competitions

- Leverage event Live Streaming on YouTube and other social media platforms for global reach.
- Engage Influencers for wider amplification.

A truly inspiring day at the Renewable Energy Competition 2025! It was amazing to see how young leaders are championing #CleanCooking and #RenewableEnergy through creativity and practical application. The breakout sessions weren't just about theory—students brought their ideas to life with powerful skits, live cooking demonstrations, and insightful essays. This isn't just a competition; it's a showcase of the next generation's commitment to a sustainable future for Uganda. This fantastic event is a joint initiative by **National Renewable Energy Platform (NREP) - Uganda** and STEPUP Standard Limited, with vital support from the **Ministry of Energy and Mineral Development (Uganda)**, UK in Uganda, and the Modern Energy Cooking Services (MECS) programme. Seeing this level of innovation and passion firsthand gives me great hope for what's to come.

Excited to share that I participated in the Renewable Energy Competition 2025! Just completed an amazing experience at the competition held at Silver Springs Hotel, Bugolobi, focusing on sustainable energy solutions and innovation. As a third-year Software Engineering student at Makerere University, I'm passionate about leveraging technology to address energy challenges in Uganda and beyond. The event brought together brilliant minds working on renewable energy projects, and I'm grateful for the opportunity to learn, network, and contribute to conversations about our sustainable future.

Uganda stands at a crossroads. Over 70% of our people depend on agriculture, yet land degradation, food insecurity, and climate volatility tighten their grip. The irony? We are as late as yesterday in finding solutions, yet as early as tomorrow if we dare to reimagine the path forward.

Agroecology isn't about going back to "the good old days." It is about leapfrogging with roots and algorithms in the same breath. Picture this: drones mapping erosion scars, AI predicting pest outbreaks before they happen, machine learning whispering planting dates to farmers — while agroforestry rebuilds the lungs of our landscapes, you see.

But here's the twist: Data without soil is noise. Soil without people is dust. The true revolution comes when youth innovation meets ancestral wisdom, when satellites converse with seeds, and when a farmer's hoe is backed by a digital dashboard.

The obstacles? Policy inertia, broken financing, and outdated mindsets. Yet, where cracks appear, innovation germinates. Uganda's youthful majority is not waiting — we are the present tense of resilience.

💡 Uganda can lead Africa's agroecological revolution — if we dare to integrate roots with satellites, tradition with transformation, and farming with the future itself.

Yesterday, our director, **Charlotte Basirika Bossa** had the privilege of being part of the jury for the clean cooking competition organised by **National Renewable Energy Platform (NREP) - Uganda**.

High schoolers showcased impressive skills in using clean energy to cook and presented engaging skits on the importance of ditching fossil fuels.

Proud to see young minds driving innovation and sustainability! #2sistarsmedia

This week I had the privilege of MC'ing the Renewable Energy Competition 2025, organized by **National Renewable Energy Platform (NREP) - Uganda** and **STEPUP Standard Limited**.

Young people showcased their creativity and innovation in drama, live cooking demonstrations, and essay writing — all aimed at promoting the transition to clean cooking especially efficient electric cooking.

The passion, energy, and fresh ideas from the participants were truly inspiring. Seeing youths embrace sustainable solutions reminds us that the future of clean energy is bright.

A big congratulations to all the participants and organizers for making this initiative a huge success! 🌎⚡

🤔 If life were a competition, what criteria would you use to determine the winner? As a jury member on the clean-cooking competition by the **National Renewable Energy Platform (NREP) - Uganda**, our criteria were holistic, including how collaborative the cooks were.

👏 I congratulate **Mengo Senior School**, St.Henry's College Kitovu, and **Gayaza High School** for doing better than their peers.

🌿 Clean cooking preserves our health and the environment.

I am honoured to have received a Certificate of Participation in the Renewable Energy Competition 2025, and grateful for the opportunity to attend this inspiring event at Silver Springs, Bugolobi.

This experience has strengthened my commitment to advancing renewable energy solutions and supporting the transition to a more sustainable, climate-resilient future.

A big thank you to the organizers, mentors, and fellow participants who made this event impactful and memorable. Together, we can power a greener tomorrow.

I was honoured to participate in the Renewable Energy Competition 2025, hosted by the (**National Renewable Energy Platform (NREP) - Uganda**) under the **Ministry of Energy and Mineral Development (Uganda)** , in partnership with UKaid, Uganda National Alliance on Clean Cooking(UNACC), and Modern Energy Cooking Services(MECs), at Silver Springs Hotel, Bugolobi. The event featured clean-cooking demonstrations, essay writing, and skit presentations, highlighting the creativity of young people driving the shift to modern energy solutions. This initiative directly supports SDG 7: Affordable and Clean Energy and advances Uganda's National Development Plan(NDP) IV objective of universal access to sustainable energy.

As Dr. Brian Isabirye, NREP Commissioner, said:
"THE FUTURE BELONGS TO THOSE WHO CAN RENEW IT."

Let's embrace Clean Cooking not only for its environmental benefits but most importantly for our own health benefits.

💡 My experience at the Renewable Energy Competition 2025
I recently participated in the Renewable Energy Competition 2025, organized by **National Renewable Energy Platform (NREP) - Uganda**, with support from the **Ministry of Energy and Mineral Development (Uganda)** and **MECS programme**

💡 The event was truly inspiring. While I didn't win the essay competition, I'm more motivated than ever to improve my writing skills. It was an incredible learning experience, and I loved seeing all the innovative ideas firsthand.

💡 A major highlight was watching the skits on clean cooking by different schools. They were creative and powerful, showcasing a clear commitment to a more sustainable future. I even got to taste the delicious food prepared using pressure cookers, which was a great way to see the technology in action.

💡 Thank you to **Student Energy at Makerere University** **Ronnie Linslay Atuhaire** **Asasira Arthur** **STEP UP UGANDA** for providing these amazing opportunities to learn and grow. Events like this give me great hope for what's to come and show just how much young leaders are championing a sustainable future for Uganda.

Clean Cooking Meets Creativity: A New Era for Energy Awareness

The Renewable Energy Clean Cooking Championship brought together schools like Gayaza, Namilyango, Mengo, and many others showcasing clean cooking concepts not only through cooking competitions, but also through skits, essays, and artistic performances.

At CREEC, we've long believed that creativity is a powerful catalyst for change. From producing movies, TV series, and radio dramas to raise awareness about energy, to now seeing schools champion clean cooking through art, the shift is clear: energy concepts resonate more deeply when told through relatable, creative stories.

As we continue driving innovation in clean energy, we invite partners academic institutions, private sector actors, development partners, and creatives to join us in scaling these approaches. Together, we can make clean cooking not just a policy conversation, but a lived experience in every community.

Congratulations to **National Renewable Energy Platform (NREP) - Uganda** and **Step Up** for a phenomenal event.

We had to eat the food no matter how it turned out!

Yesterday I attended the Renewable Energy Clean Cooking Championship by **National Renewable Energy Platform (NREP) - Uganda** with different schools in attendance. They weren't just competing in cooking but also through skits, essays, and other fun activities that showcased their own creative take on clean cooking concepts.

We had schools like Gayaza, Namilyango, Mengo, and many more in the mix. What excited me most was seeing the clear shift in the sector: there's now real consideration for creativity and art in how we share and spread energy concepts.

At the start, we made a pact to eat the food however it came out but it was delicious! Once again, the electric pressure cookers proved themselves: efficient, reliable, and preserving the true taste of food.

This resonates deeply with me because in the past I've led projects that used movies, TV drama series, and radio storytelling to spark conversations on energy and I know the power creativity holds in driving change. Events like yesterday's remind me just how much more we can achieve if we keep blending innovation with art.

How else do you think we can use creativity through art, drama, or storytelling to make clean energy solutions resonate with communities? I'd love to hear your thoughts.

Yesterday, I was privileged to attend the **#RenewableEnergy** Competition 2025 a joint initiative by the **National Renewable Energy Platform (NREP) - Uganda** and **STEPUP Standard Limited** aimed at engaging young people in driving behavioral change and promoting the adoption of **#CleanCooking** technologies.

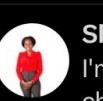

I witnessed how youth and students from various schools showcased their talents and skills while championing **#RenewableEnergy** and **#CleanCooking** through skits, cooking demos, and essay writing.

👏 Congratulations to all the winners  and heartfelt appreciation to the teachers for all the support and training the students.
